BDI Hungary and SKF Welcome Customers for SKF Linear Day

BDI Hungary and SKF co-hosted SKF Linear Day recently at BDI's main office in Budapest. Drawing more than 60 maintenance managers and purchasing decision-makers from 38 companies, the event showcased BDI-Hungary's capability for cutting linear rails and shaft at five (5)-micron accuracy and in record turnaround time!

BDI Hungary's Managing Director and PT Manager led the exhibition along with eight SKF employees. Guests were able to try SKF's linear motion products and tour the offices and warehouse.

A number of BDI's automobile industry customers (and potential customers) attended, enabling BDI Hungary to highlight and discuss its FSI capabilities. "It's difficult for decision makers to take time out of their day to come to an event like this," says BDI Europe Managing Director Zoltan Arkovics. "We were very pleased---not only did we introduce many new products but we were also able to demonstrate our service qualifications."
